Additional	Stop noises	Motor on/off noises	Motor off cluster	Motor on cluster				

Manual: 58 keys (C → a''')
 Pedal: 30 keys (C → f')

Bold: these stops and stop combinations has additional room release multisamples

Configuring the decay time of the release multisamples:

The release multisamples can be adjusted to achieve different reverb times. The original concert hall has a decay time of approx. 1,9 seconds. This is the default setting for the factory presets.

To change these settings globally please select one preset and enable the edit mode for sound slot 6.

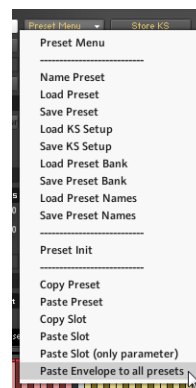

Now adjust the Sustain knob to „-inf“ and the Decay and / or the Hold knob to your taste.

Hint → We recommend leaving the values for Attack at 32.1 ms and the Attack Curve at Concave 1.

To save these settings globally go to the preset menu and select „Paste Envelope to all presets“.

Hardware & Software requirements and recommendations

- Full version Native Instruments Kontakt 5.5 or higher
- 88 keys midi-keyboard with Mod Wheel, Pitch Bend and Sustain Pedal
- Recommendation: freely configurable MIDI Controller Box or an iPad/Android Tablet with TouchOSC
